

The Tellabs Titan 5500 Digital Cross Connect is a digital communications switch that is nearly unrivaled. Providing STS, OC-3, OC-12, OC-48, DS3, DS-1 and VT interconnection, the 5500 is capable of handling almost any communication need. The system has been designed from the ground up to provide scalability, reliability and maximum redundancy, ensuring that there is never major service outage. And with the capability of remote access, configuration and software upgrades, the 5500 also relieves engineers and administrators of some level of stress in systems administration.

XTech Gear is able to provide all manner of testing and repair services for the Titan 5500 and all of its necessary equipment. We pass live traffic through the switch to ensure that the equipment performs the same in the field as it does in our lab.

Listed below are some of the circuit packs that we routinely test and repair for the Tellabs Titan 5500.
